

Rock Band Family Tree

Idea and Design by: Aaron McRae - JULY 2026

-  Band node or 'Star' - Saigon Kick
-  Founding band member - Jason Bieler 1
-  Long time band member - Steve Gibbs 2
-  Short term band member or touring musician - Tom Defile 3

The homepage introduces the site through a full-screen, interactive D3.js network map that visualizes bands as connected star clusters. Inspired by Seattle's summer night sky, the interface turns each band into part of a living constellation, with new bands and relationships appearing in real time as subtle nova-like bursts.

Navigation buttons and pop-out dialogs draw from early-2000s Flash MX design language, using bracketed button treatments and frosted, semi-transparent glass panels to create a nostalgic but polished interaction layer.

The Premier Rock Band Family Trees - Created by Musicians, for Musicians

SEATTLE SUMMER CONSTELLATION

Explore the rock sky.

The homepage opens as a living night map where bands become star clusters, relationships glow into view, and new connections arrive like quiet nova bursts across the Seattle scene.

Selected constellation

Mother Love Bone sits at the center of several paths here, linking earlier groups to later Seattle-era constellations through shared players and scene momentum.

Mode

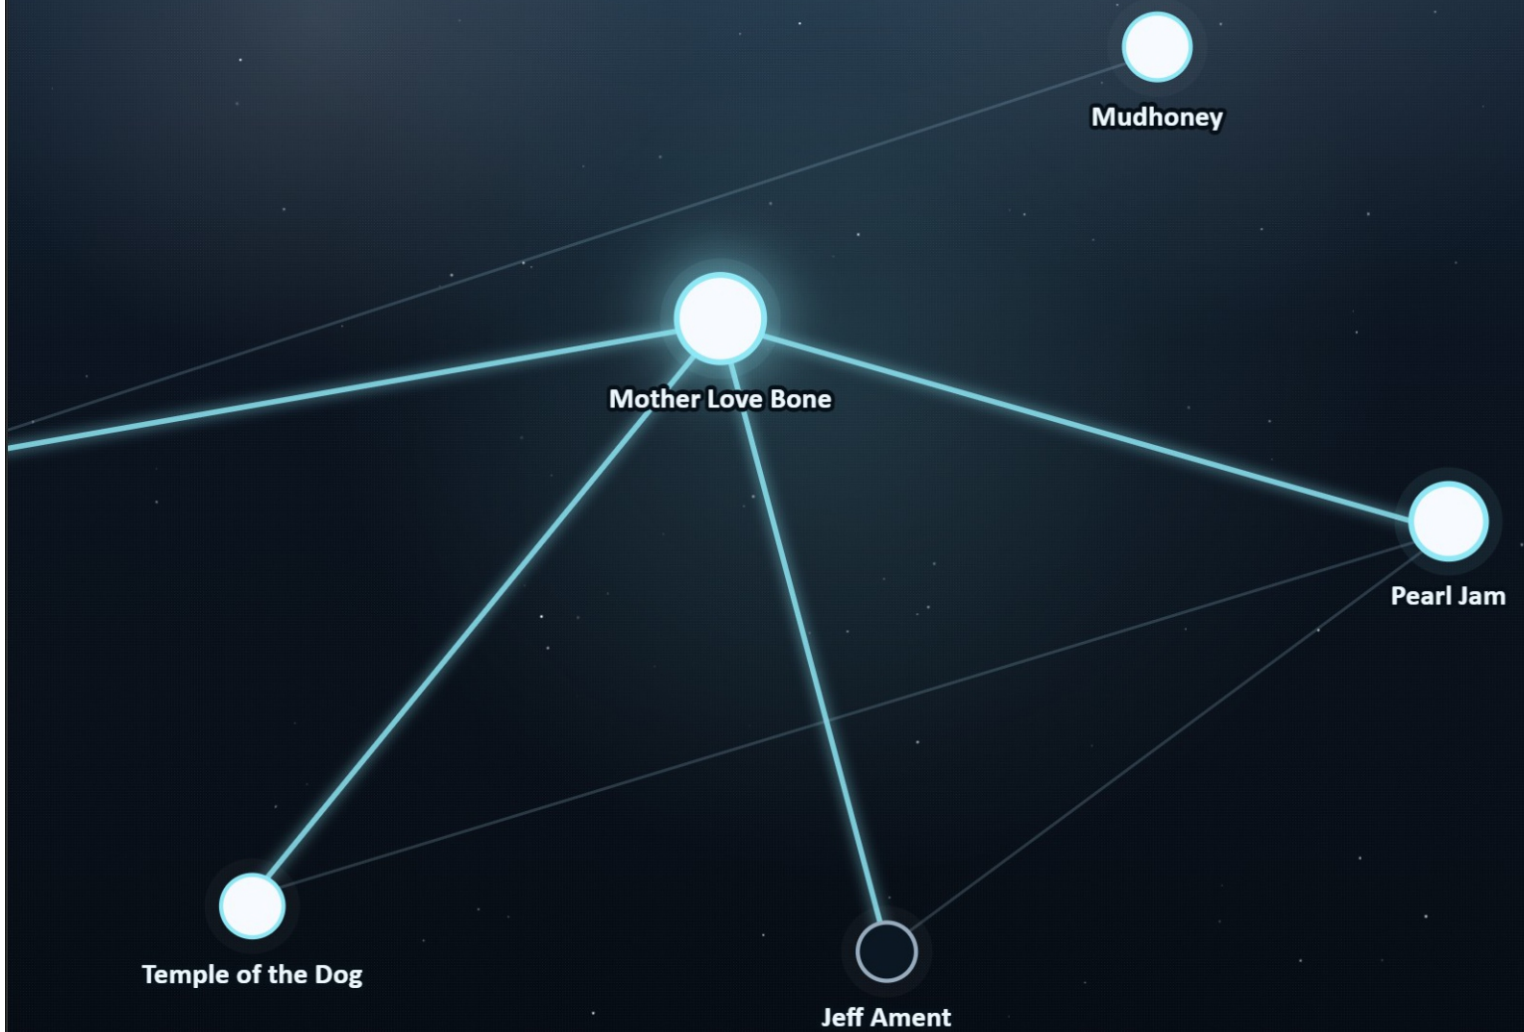

Interactive homepage sky map

UI language

Flash MX brackets + frosted glass

Motion

Slow drift, soft nova bursts, live network reveals

● founder / anchor band ● related band ● fresh relationship burst
